

SUSTAINABLE DEVELOPMENT

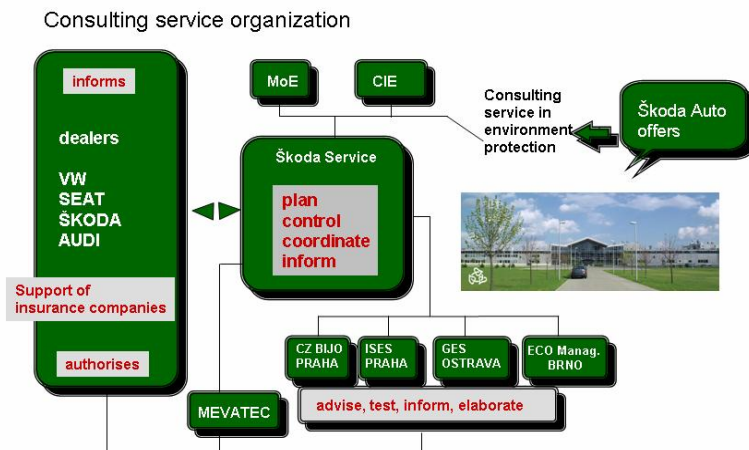

Ecology in the dealer and service network

Consulting service in environmental protection

Compliance with the principles in the area of waste management, protection of the atmosphere and protection of water; these are the priorities of ecological policy which Škoda Auto has targeted in its activities in the dealer network.

Škoda Auto in 1996 introduced a qualified and flexible Consulting Service for Protection of the Environment, with the objective to introduce a quality system for management and control of environmental protection at each of its business partners. Those of the dealers that fulfil the exacting criteria of the ecological audit and eliminate possible deficiencies, will be awarded the prestigious Certificate for Environmental Friendly Approach to the Environment or the, so-called, Green Seal.

Currently, 83 dealers have already been awarded the Green Seal.
